

Category	Amazon Redshift	Snowflake	Redshift New release Upgrades
Auto Scaling	WLM configuration required. limitation in scaling	Supports multi-cluster with auto scaling policy	Feature is made available in the new redshift in Q1 2019. Limitation - only read queries go to auto-scaling cluster. Storage and Compute to be separated in redshift by Q1 2020.
Storage Elasticity	Read only or downtime during scale	Instant Scalability without disruption	Redshift has 3 minutes downtime. Auto storage scaling to be made available in new redshift in future. Scheduled Elastic Resize by H2'2019.
High Availability	Default - Single AZ, HA needs to be setup explicitly	Default 3 data copies	2020. Multi-AZ to be supported in redshift when storage & compute is seperated.
Data Distribution	Requires sort and distribution keys	Distribution is built-in	Feature is made available in the new redshift in Q2 2019.
Data Administration	Explicit maintenance jobs for STATS, VACUUM reindex jobs needed	Maintenance jobs not required for data administration	Feature is made available in the new redshift in Q1 2019.
Data Sharing	Data copies to be shared – SFTP, S3	Instant data sharing without data copies	Feature not supported in the new redshift as of now.
Data Security	Encryption to be enabled explicitly	Automatic – at rest and in-flight	Supports unload to parquete format in future (coming soon). Supports single of encryption.
Workload Isolation	Feature not supported	Seperate clusters for ELT, BI and ML	Feature not supported in the new redshift as of now. Would be available by Q1 2020.
Time Travel	Data from backup to be restored	Time travel supported - only for 90 days	Feature not supported in the new redshift as of now.
Columnar Support	Feature Available	Feature Available	Feature Available
Tableau BI	Feature Available	Feature Available	Feature Available
Machine Learning	Feature Available	Feature Available	Feature Available
Un-Structured Data	Supports Integration	Integration not supported	Supports Integration
API Gateway	Supports integration	Supports Integration – additional configuration	Supports Integration – additional configuration
Data Unloading	Supports data unloading into S3 - delimited files	Supports data unloading into S3 - delimited files	Supports data unloading into S3 - delimited files
Multi-byte Data	Character set supported	Character set supported	Character set supported
